Summary

Backend-focused software engineer who builds production APIs, third-party integrations, and cloud services in C#.NET and Azure. Experienced owning features end to end, from technical design through release and production support, in a high-traffic SaaS platform. Strong in API design, authentication, asynchronous messaging, and data pipelines, with an MBA that adds a business and data lens to engineering decisions.

Experience

Netsmart — Software Engineer

Sept 2024 – Present

- Build full-stack features for a production SaaS platform supporting thousands of peak concurrent users, spanning legacy ASP.NET MVC applications and modern .NET 8 / Azure Functions services.
- Owned 2 of the platform's 5 external partner integrations, designing and building C# REST APIs that exchange data with third-party systems inside live customer workflows.
- Built a new partner integration from the ground up (API endpoints, data-import pipeline, dependency injection, SQL Server) and shipped it to production, where it is used by customers.
- Implemented OAuth, authorization, asynchronous message processing with Azure Service Bus, and caching with MongoDB, reliably processing tens of thousands of integration messages per day.
- Delivered standards-based (FHIR) API and UI features end to end, owning design, release, and production troubleshooting; onboarded 2 new engineers.

Quest Analytics — Software Engineer Intern / Contractor

2022 – May 2024

- Developed and maintained a C#.NET data-analysis application used by CMS (a federal agency) and large healthcare networks to evaluate network adequacy.
- Fixed defects and shipped features across a legacy desktop application (C#, XAML) and a React front end.

Projects

NextMovie — Movie Recommendation Platform ([GitHub](#))

2026 – Present

- Building a platform that finds the best unseen film a user can stream tonight: ASP.NET Core (.NET 10) API, Next.js / React / TypeScript front end, PostgreSQL via EF Core, in a pnpm + Turborepo monorepo.
- Designed a recommendation engine that pools candidates from TMDB relatedness and ranks them against a taste profile computed from the user's ratings, with an explanation for every pick and per-region streaming availability.
- Built an offline evaluation harness (hold-out Recall@N, MRR, cross-user list overlap) that caught personalization failures the unit tests passed.
- Built a background import pipeline that matches Letterboxd exports to TMDB with a manual review queue, plus JWT sessions with refresh tokens and Google sign-in.
- 490+ automated tests, GitHub Actions CI, and 13 written architecture decision records; Azure deployment with Terraform in progress.

Technical Skills

Languages: C#, TypeScript, Python, SQL, JavaScript, Java, C++

Frameworks: .NET 8/10, ASP.NET Core, ASP.NET MVC, Entity Framework, Next.js, React, Django

Cloud & Backend: Azure Functions, Azure Service Bus, REST API design, OAuth, JWT, async messaging, caching

Data & Tools: SQL Server, PostgreSQL, MongoDB, Docker, GitHub Actions, Git

Education

Kansas State University

M.B.A., Data Analytics focus — 2024

B.S., Computer Science — 2024
